AROH

Wake up knowing what matters, why it matters, who needs to act — and what Aroh has already done about it.

Owner Intelligence for Indian business owners

Built on Metorite (Hathi Labs) · Owned and sold by DEWiN · October 2026

THE MISSING THING

Growing a business has given owners more information and less peace of mind

Six questions an owner asks that no system answers

THE OWNER ASKS	THE FAILURE UNDERNEATH
“What am I missing?”	Exception invisibility
“Why did nobody tell me?”	Information latency
“Did anyone actually do it?”	Follow-through risk
“Whose version is right?”	Cross-system reconciliation
“Why do I have to chase this?”	Management overhead
“Can I trust the number?”	Provenance

THE ENEMY

The enemy is the owner’s head as the integration layer

- ERP, CRM, email, WhatsApp and managers all exist — and the owner joins them up, **from memory, every day**.
- The real cost is not hours chasing. It is the **growth the owner never pursues** because they are busy checking that nothing broke.
- India’s path to **$6T by 2030** (IMF) runs through firms that keep growing past the size one person can watch.

68 hrs

worked per week by owners in an Indian field study, who kept decisions in the family for lack of information to delegate

FROM → TO

From carrying the business in one head, to knowing someone is watching

OLD WAY	WITH OWNER INTELLIGENCE
Wake up asking “what am I missing?”	**07:30 brief:** the three things that matter today
Updates whenever someone remembers	Exceptions the moment a threshold is crossed
Chasing follow-ups on WhatsApp	**18:30 close-out:** what finished, what didn’t
Five systems, five numbers	One answer, with its source shown
Dashboards to read	A brief that reads them for you
Delegation by memory	Every commitment tracked to its outcome

THE CATEGORY

We are creating a category: Owner Intelligence

Business intelligence

Serves analysts with dashboards.

Owner Intelligence

Serves the owner with priorities, answers and follow-through. Like a good chief of staff: **observes → recommends → prepares → acts, with permission.**

- Name searched: no product or category by this name. “AI chief of staff” is already used by **11+ products** — a contested label cannot be owned.
- Price and framing signal an executive product, not a tool.

THE PRODUCT

The product exists: a working company OS, with approval before every change

10

live apps in production: tasks, calendar, projects, people, AI chat, approvals…

India

hosted databases; each company's data separated at row level

- Daily loop: 07:30 brief → tap to see sources → approve actions → silence unless something matters → 18:30 close-out.
- Autonomy set per user × system × action × amount; sensitive actions always ask first.
- AI processing moves into India **before the first paid contract**.

Honest gaps

Email and WhatsApp connectors are still in preview.

No external paying customers yet.

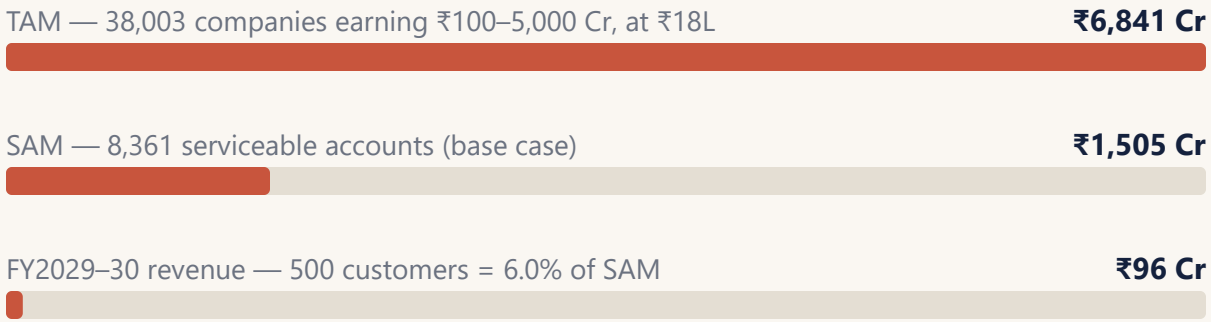

WHY NOW

Why now: seven things changed together

DRIVER	EVIDENCE
National stakes	IMF: India passes $6T in 2030
AI cost collapse	Inference price for fixed capability falls ~40× a year (Epoch AI)
Adoption ahead of readiness	47% of Indian firms run GenAI in production; 4% have AI-ready data
CEO pressure	66% of Indian CEOs worry about keeping pace (vs 42% globally)
Trust	Frontier models now run inside India (Bedrock Mumbai/Hyderabad)
Law	DPDP Rules notified Nov 2025; 18-month phase-in
Budgets	Indian software spend +17.6% to $24.7B in 2026 — none bought *for the owner*

THE MARKET

38,003 businesses fit; owners already spend ₹21–32L a year on pieces of the job

SAM filters are low-confidence; a 50–100-promoter discovery programme will validate them.

₹21.6–31.7L

a year an owner's office already spends on assistants, MIS and analysts

~₹2.2 Cr

a year per firm: value of better management in Indian field evidence — Aroh costs ~8% of that

COMPETITION

Seven categories serve someone other than the owner

CATEGORY	BUILT FOR	THE GAP
Per-employee copilots	Each employee	Waits to be asked; one vendor
Agents inside ERP/CRM	Users of one system	Knows one system
Personal AI assistants	One person’s inbox	Personal; US-first; no ERP
Agent platforms	IT teams	A kit, not a product
Indian AI providers	Customer conversations	Faces the customer
BI / dashboards	Analysts	Reports, doesn’t act
“AI chief of staff” tools	Executives (mostly US)	Per-seat; none India-based

Closest threat: frontier labs’ personal agents. Our answer: organisation-level, India-hosted, ERP- and WhatsApp-aware.

BUSINESS MODEL

One price, built to say “this runs your business”

₹1.5L

per organisation per month

₹18L a year, billed upfront

+ ₹6L setup, spread over year one

10 executive users included · extra seats ₹10,000/month · no discounts

92%

variable margin per customer after AI and production infrastructure

~109%

net revenue retention after 10% churn (7% uplift + extra seats)

2.4 mo

CAC payback

10.9×

five-year LTV : CAC

THE EVIDENCE

The test is dated: ten pilots by December, fifty paying owners by March

Nov 2026
Pre-launch starts
DEWiN bridges ₹5 Cr

Dec 2026
10 free pilots complete
six-week pilots, one loop each

Mar 2027
50 owners sign & onboard
billed annually upfront

FY2027–28
150 customers by Mar 2028
profitable from Q1

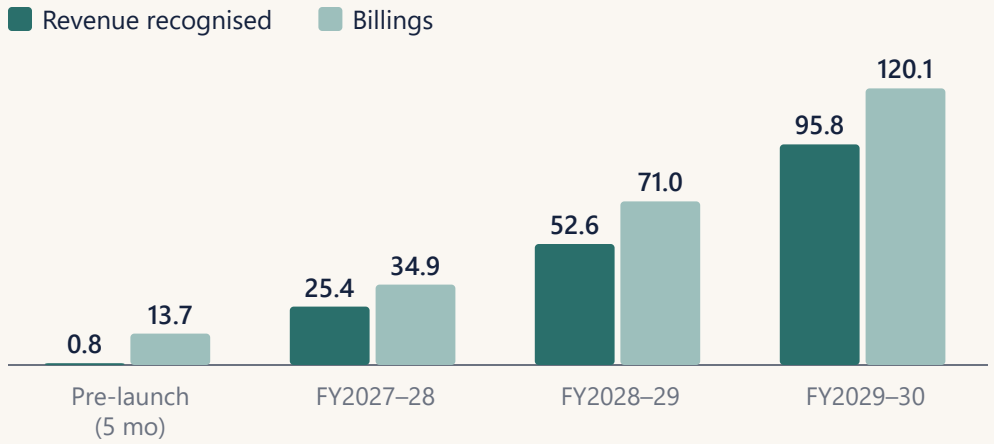

- **Free six-week pilots** on one business loop.
- Fifty owners sign directly through DEWiN's relationships and word of mouth among founders.
- Faster adoption than a CRM or ERP: a brief to read, not a system to learn; first value in days.

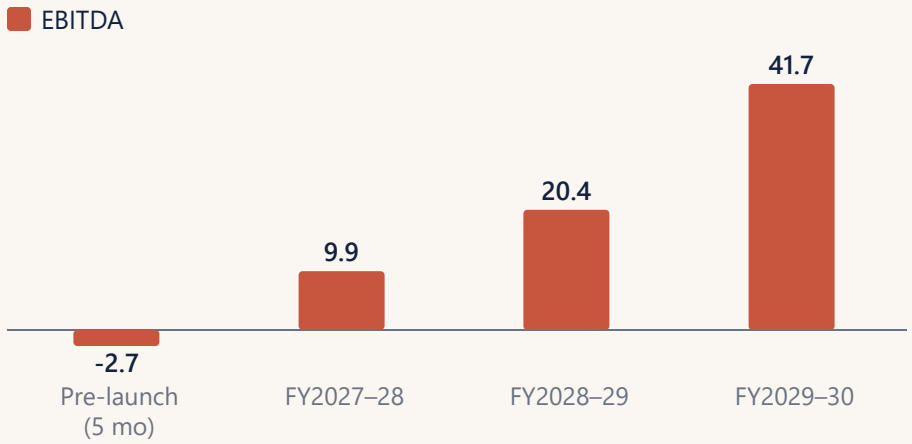

Founder-stated, unproven

The fifty contracts are a belief until signed. A named-prospect list is reviewed monthly.

THE NUMBERS

₹96 Cr of revenue and ₹106 Cr of ARR by March 2030

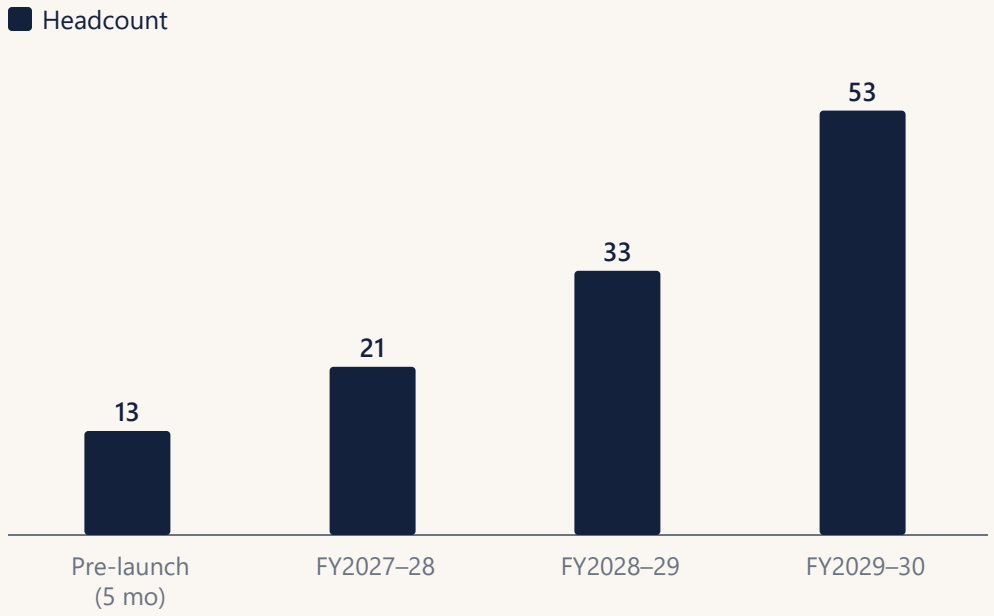

₹ CRORE	PRE-LAUNCH (5 MO)	FY2027–28	FY2028–29	FY2029–30
Customers (end)	57	150	300	500
Revenue (recognised)	0.8	25.4	52.6	95.8
Billings (cash invoiced)	13.7	34.9	71.0	120.1
EBITDA	−2.7	9.9	20.4	41.7
Headcount	13	21	33	53

Pre-launch is a five-month stub (Nov 2026–Mar 2027), not annualised: March contracts are billed upfront (₹13.7 Cr) but recognised over the following year.

THE TEAM

A small team, with swarms of agents doing engineering, DevOps and support

- Forward-deployed engineers earn trust on site; developers productise every connector.
- Development & operations cloud for agent swarms, CI and staging: **₹0.4 → 2 → 4 → 7 Cr** a year.
- Production costed explicitly: ₹4L/month platform floor + ₹3,000 per customer per month; AI at measured production cost.
- Gross margin **83–84%** once live.

Founder thesis: agents raise each person's output — to be proven with onboarding hours (target 20) and support resolved without a human.

RISK

Fourteen risks; one decides the outcome

Decisive

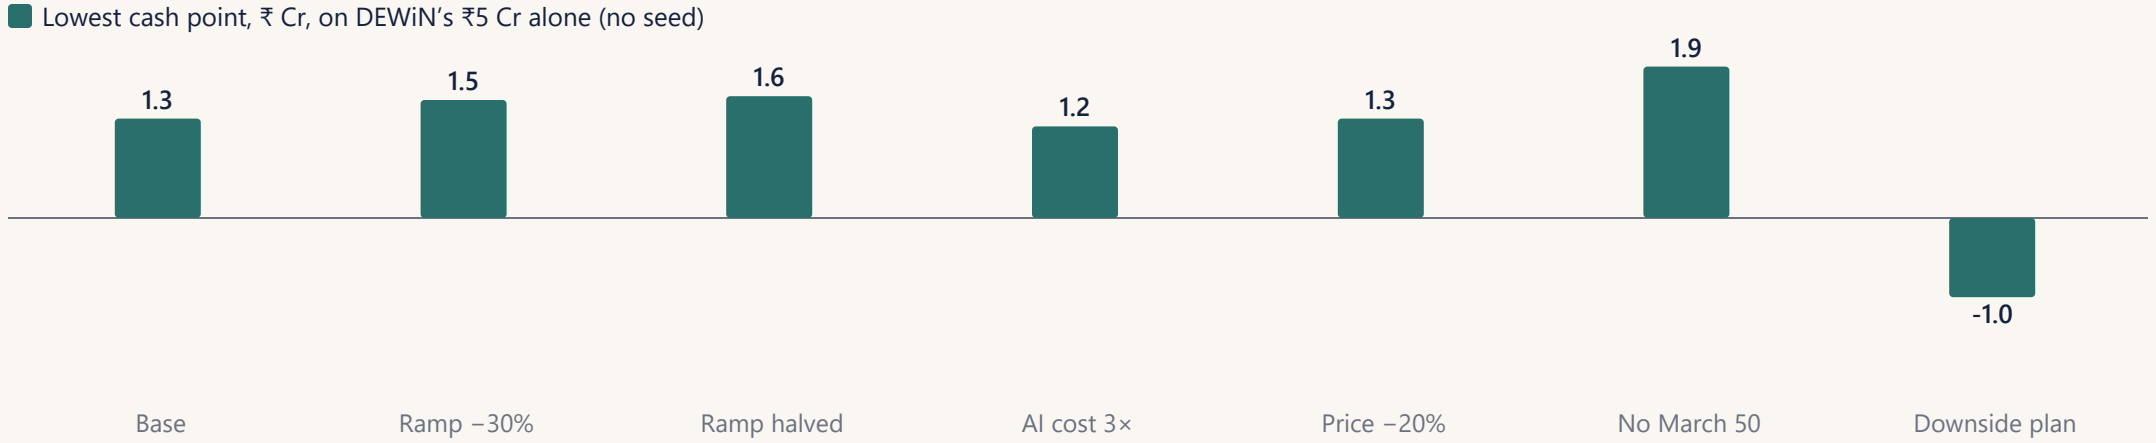

Fifty paying owners by 31 March 2027, and the March receipts arriving on time.

Absorbed

Lower conversion, 20% churn, AI costs 3×, a 20% price cut, even a halved ramp.

If the fifty do not sign

The previous plan (0 → 20 → 90 → 250) needs ~**₹6.0 Cr** — covered by a ~₹5 Cr seed and gated spend.

Others: AI processing outside India until migrated; platform reviews (Google, Meta); IP between DEWiN and Hathi Labs.

THE ASK

The ask

For DEWiN's shareholders

Commit **₹5 Cr** to bridge the pre-launch — ₹3.7 Cr of costs fall due before the March receipts.

Open your networks for the fifty. Complete the IP assignment.

For outside investors

A seed round is raised **after** 31 March 2027, priced on ~57 paying customers and ₹10.3 Cr ARR — or not at all if cash flow covers growth.

Until then: pilots, the prospect list and the model are open for review.

₹15 Cr
cash at March 2027 if customers pay on time

₹121 Cr
cash at March 2030

0
outside dilution before the evidence

₹10.3 Cr
ARR at March 2027
